

We leave you better.

## Intelligent Automation Proof of Concept

**Automate key elements of a business process to help you reimagine what's possible and advance your growth.**

Our consultants will evaluate automation candidates and jointly select one of your business processes to automate and demonstrate during this project. We will develop the automation from concept through creation and then help you demonstrate its capabilities.

### PROJECT OUTLINE

- Present an overview of Intelligent Automation (IA) and how it may apply to your organization.
- Select an automation candidate for proof of concept development and produce a current state high-level process map and business case value estimate.
- Develop the proof of concept bot for the selected automation.
- Present a demonstration of the bot proof of concept.
- Wrap up with the presentation and delivery of an implementation plan, documentation, and cost estimates for next steps.

### AUDIENCE

- Process Owner or Business Stakeholder
- Business Analyst or Business Systems Analyst
- Solution or Enterprise Architect
- Portfolio Manager
- Change Manager
- IT Stakeholder

### TIMELINE

Up to two weeks

### OUTCOME

UDig's Proof of Concept engages your organization through hands-on process mapping and provides you the opportunity to see your newly automated process in action. This initiative will help showcase the potential value of Intelligent Automation and generate stakeholder buy-in.
